I am strongly opposed to HR 4026 because the information I receive not only helps me to avoid emergency situations and traffic tie ups it also removes one more vehicle from hindering emergency workers while performing their duties. I think every vehicle on the road should have the information received on these channels at their immediate access. I believe having this info exactly when you need it can help to make those last minute route changes you may have to make to avoid situations which also help to keep a smooth traffic flow around the cities. I think this info needs to be at your immediate disposal not broadcast only at the top of the hour or when it is convenient for someone else. I earn my living hauling food products to all points of the country, being able to make timely deliveries around increasing DOT regulations and ever increasing amounts of traffic, road construction, and inclement weather I need to have all the info I can get to help me keep my products arriving to the store on time. The XM Instant Traffic & Weather channels are one more of the daily tools I use to help me get the load there on time. I need instant access to this info, don't take it away and make my job more difficult than it already is.
